Technical Data

Cracking pressure—the inlet pressure at which the first indication of flow occurs (steady stream of bubbles).

Reseal pressure—the pressure at which there is no indication of flow.

Back pressure—the differential pressure between the inlet and outlet pressures.

⚠ For valves not actuated for a period of time, initial cracking pressure may be higher than the set cracking pressure.

For more information about pressure ratings of valves with tube fitting end connections, see Swagelok® *Tubing Data*, [MS-01-107](#).

① Other cracking pressures are available; contact your authorized Swagelok sales and service representative.

② For cracking pressure of 25 psi (1.8 bar), maximum back pressure is 3000 psig (206 bar).

Testing

Every C, CA, CH, CP, and CPA series check valve is factory tested for crack and reseal performance.

Check valves with fixed cracking pressures, C, CP, and CH series, are cycled six times prior to testing. Seats have a maximum allowable leak rate of 1 std cm³/min nitrogen.

Check valves with adjustable cracking pressures, CA and CPA series, are tested at two pressure points. Every valve is tested at a low-pressure setting and at a high-pressure setting. Seats have a maximum allowable leak rate of 1 std cm³/min nitrogen.

Cleaning and Packaging

Every C, CA, and CH series check valve with VCR® or VCO® end connections is processed in accordance with Swagelok *Special Cleaning and Packaging (SC-11)*, [MS-06-63](#), to ensure compliance with product cleanliness requirements as stated in ASTM G93 Level C.

All other C, CA, and CH series check valves, as well as every CP and CPA series check valve, are cleaned in accordance with Swagelok *Standard Cleaning and Packaging (SC-10)*, [MS-06-62](#).

Fluorocarbon FKM	-VI	10 to 375 (-12 to 190) ^①
Neoprene	-NE	-40 to 250 (-40 to 121)

① 10 to 400°F (-12 to 204°C) for CH series.

Example: B-2C-**VI**-1/3

Additional seal materials are available. Contact your authorized Swagelok representative for details.

Special Alloys (All Series)

Springs of alloy 400 or alloy C-276 are available in some sizes. Valve bodies of alloy 400, carbon steel, aluminum, or other alloys are available in some sizes. Contact your authorized Swagelok representative for more information.

Inlet Gaskets (2C, 4C, 6C, and 8C Series)

PTFE-coated 316 stainless steel inlet gaskets are available for 2C, 4C, 6C, and 8C series valves to reduce the possibility of dislodging the O-ring in systems where pressure surges, shock, or pulses occur. Gaskets are standard for select valves; see the table below for details.

Cracking Pressure psig (bar)	Inlet Gasket		
	2C, 4C Series	6C, 8C Series	12C, 16C Series
< 50 (3.5)	Optional	Optional	Standard
> 50 (3.5)	Optional	Standard	Standard

To order an inlet gasket, if it is not standard, insert **-FG** into the valve ordering number.

Example: SS-4C-**FG**-1

Deflector Caps (4C, 8C, CP, and CPA Series)

A polyethylene deflector cap is available for 4C, 8C, CP, and CPA series valves with male NPT end connections. The deflector cap deflects flow from direct contact with personnel and prevents atmospheric contaminants from entering the valve. The deflector cap screws easily onto the male NPT outlet end of the valve. Maximum rating is 300 psig at 100°F (20.6 bar at 37°C).

To order, insert **-DG** for a green cap or **-DR** for a red cap into the ordering number.
